This Wireless PC Lock is a convenient aid for protecting your personal details and programs when you leave your workstation for short periods of time. The PC Lock comprises a receiver that you connect via the USB port or your PC or notebook and a transmitter than you can attach to your key ring, for instance. As soon as you move more than 2 metres away from your workstation, your PC locks automatically. This optimally protects your personal information from nosey colleagues or housemates who are unable to control their curiosity. As soon as you are back in the 2 metre radius, the PC unlocks again so that you can carry on working without a care in the world
